

Wallet System: USER / ORG SIDE

Laravel project **/fundraise** — donor, fundraiser & organization perspective.

Entity Relationships (User-relevant)

From	Relation	To	Notes
User	1 : 0..1	Wallet	owns via owner_type=User
Organization	1 : 0..1	Wallet	owns via owner_type=Organization
User	1 : 0..*	Organization	owner (user_id); auto 'individual' org on payout
User	1 : 0..*	Campaign	creator
Campaign	1 : 0..*	Donation	receives
Donation	1 : 0..*	WalletTransaction	credit source=donation
Donation	1 : 0..1	SettlementItem	allocated to payout
Wallet	1 : 0..*	WalletTransaction	ledger

WALLET

Field	Type / Key	Description
id	PK bigint	primary key
user_id	FK bigint	legacy owner user
owner_type	string	User Organization (morph)
owner_id	bigint	morph id
balance	decimal(2)	available / withdrawable
reserved_balance	decimal(2)	hold window (7 days)
pending_settlement_balance	decimal(2)	locked in payout
currency	string	INR

WALLET TRANSACTION

Field	Type / Key	Description
id	PK bigint	primary key
wallet_id	FK bigint	-> wallet
type	string	credit debit
amount	decimal(2)	magnitude
source	string	donation refund settlement adjustment gift_card coupon
reference_type	string	Donation Refund CampaignSettlement
reference_id	bigint	idempotency key
balance_after	decimal(2)	snapshot
notes	text	audit

DONATION

Field	Type / Key	Description
id	PK bigint	primary key
user_id	FK bigint	donor / creator
campaign_id	FK bigint	-> campaign
total_amount	decimal(2)	gross
platform_fee	decimal(2)	fee
net_amount	decimal(2)	net to wallet

payment_status	string	completed
is_refunded	bool	refund flag
paid_at	datetime	hold window start
released_at	datetime	reserve matured stamp

User-Side Flow

#	Action	Code / Effect
1	Wallet auto-created on first use	WalletService::getOrCreateWallet (INR, balance=0)
2	Donation paid (webhook)	PaymentController -> WalletService::credit SOURCE_DONATION -> reserved_balance+
3	Hold matures (daily cron)	wallet:release-reserves -> reserved_balance- , balance+ , donation.released_at set
4	Open dashboard	WalletController::index shows balances + eligible donations + pending settlements
5	Request payout	WalletController::requestPayout -> requestSettlement: balance- , pending_settlement+ , status=pending
6	Wait for admin	funds locked; status visible as pending_approval / paid / rejected

Eligible donations = completed, not refunded, hold matured (paid_at <= now-7d), released_at null, and not already locked in a pending/approved settlement. A standalone fundraiser is given an auto-created 'individual' Organization so settlements (org-scoped) can be created.

Money lifecycle: reserved_balance → balance → pending_settlement_balance → paid
