

Wallet System: ADMIN SIDE

Laravel project **/fundraise** — oversight, adjustments, settlement approval.

Entity Relationships (Admin-relevant)

From	Relation	To	Notes
User (admin)	1 : 0..*	CampaignSettlement	approved_by / rejected_by
Organization	1 : 0..*	CampaignSettlement	requests payout
Organization	1 : 0..*	PayoutAccount	verified bank/UPI
CampaignSettlement	1 : 0..*	SettlementItem	contains
SettlementItem	1 : 0..1	Donation	allocated donation
Wallet	1 : 0..*	WalletTransaction	ledger (manual adjust)
Donation	1 : 0..1	Refund	debit on refund

CAMPAIGN_SETTLEMENT

Field	Type / Key	Description
id	PK bigint	primary key
campaign_id	FK bigint	-> campaign
organization_id	FK bigint	-> organization
gross_amount	decimal(2)	sum total_amount
platform_fee	decimal(2)	sum platform_fee
net_amount	decimal(2)	sum net_amount
status	string	pending_approval paid rejected failed
approved_by	FK bigint	admin user
rejected_by	FK bigint	admin user
rejection_reason	text	required on reject
paid_at	datetime	payout sent
gateway_reference	string	payout reference

SETTLEMENT_ITEM

Field	Type / Key	Description
id	PK bigint	primary key
campaign_settlement_id	FK bigint	-> settlement
donation_id	FK bigint	-> donation
amount	decimal(2)	= donation.net_amount

ORGANIZATION / PAYOUT_ACCOUNT

Field	Type / Key	Description
organization.id	PK	user_id owner, type, verification_status, wallet_hold_days
payout_account.id	PK	organization_id, is_verified, account_ref
admin user	FK	approved_by / rejected_by on settlement

Admin-Side Flow

#	Action	Code / Effect
1	List wallets	Admin\WalletController::index (search by owner, 3 balances)
2	View ledger	Admin\WalletController::show (full WalletTransaction history)
3	Manual adjustment	Admin\WalletController::adjust credit/debit SOURCE_ADJUSTMENT (notes required)
4	Review settlements	Admin\SettlementController::index (pending_approval first, filterable)
5	Scrutiny flags	High value >= 100k / unverified payout / KYC not verified / recent refunds
6	Approve	approveSettlement: pending_settlement-, debit SOURCE_SETTLEMENT, initiatePayout(), status=paid
7	Reject	rejectSettlement: pending_settlement- , balance+ , status=rejected (reason required)
8	Refund	PaymentController debits wallet (reserved first while hold active), SOURCE_REFUND

Approve/Reject both notify the org user (SettlementApproved/Paid/Rejected notifications). Settlements are org-scoped but debit the fundraiser's single wallet (walletOwnerForOrg resolves to org owner user).

Gaps

- initiatePayout() is a STUB - logs PAYOUT_* reference; no real gateway call yet.
- wallet_hold_days on Organization is NOT honored by the cron (uses DEFAULT_HOLD_DAYS=7).
- transfer_reference declared but never populated (gateway_reference used instead).
- No payout webhook reconciliation to flip status -> failed.
